

visiTor™

Let's see,
who's at the door!

Video Intercom for iPhone and iPad

The doorbell rings... Now, you immediately see who's at the door: With visiTor you communicate with your visitors from the comfort of your sofa - or wherever you are in your home.

- When someone calls, the image automatically appears on your iPhone or iPads. You can now talk directly with your visitor and open the door.
- If you have multiple cameras installed, you can easily change between different views, e.g. monitoring the exterior of your home.

As long as you stay within the wireless range of your home, visiTor is always ready for you - the most useful innovation since the invention of the doorbell!

All that is required for the visiTor app is the controller, an iPhone or iPad with iOS 4.3, a Video intercom system (e. g. Siedle, Ritto, TCS, Gira, etc.) and a wireless connection. Your intercom system is older? No problem – visiTor is compatible with most video intercom systems.

The – unique - visiTor app is available from the iTunes Store for free. The visiTor Controller is available exclusively from visiomatic or one of our certified Partners.

Functions and Operation

visiTor – fast information

When someone presses your call button, visiTor starts automatically. In this view you can see the picture of the entry station, you hear and can talk directly to your visitor. In this view you can see the picture of the entry station, listen to your visitor and speak directly with him. You accept the call with the green button, as you're used to on the iPhone. To open the door, just tap "Open Door". With the red button you close / end the communication.

Other functions:

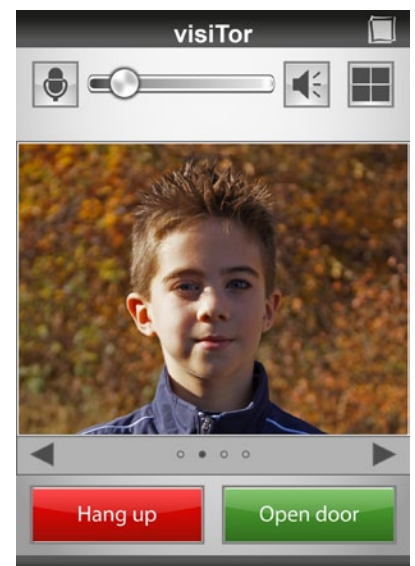

Adjust the intercom volume or mute

Mute the microphone on the iPhone/iPad

View single camera or multiple cameras in the multiple cameras view.

Functions and Operation

You can view up to four cameras at time.

Tap a particular camera to view in full screen. The points below indicate how many cameras are available and current is viewed

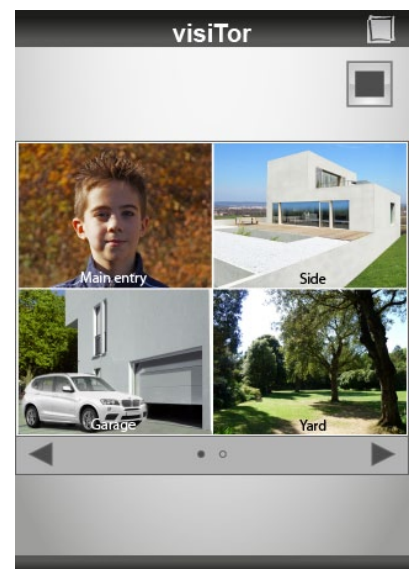

If more than four cameras are connected to your intercom system, you can switch between multiple cameras views

Switch back to single View

Video Surveillance:

Even if no one is ringing, you can start visiTor at any time to monitor the environment of your home. In this mode all video functions of visiTor are available.

Configuration and Options

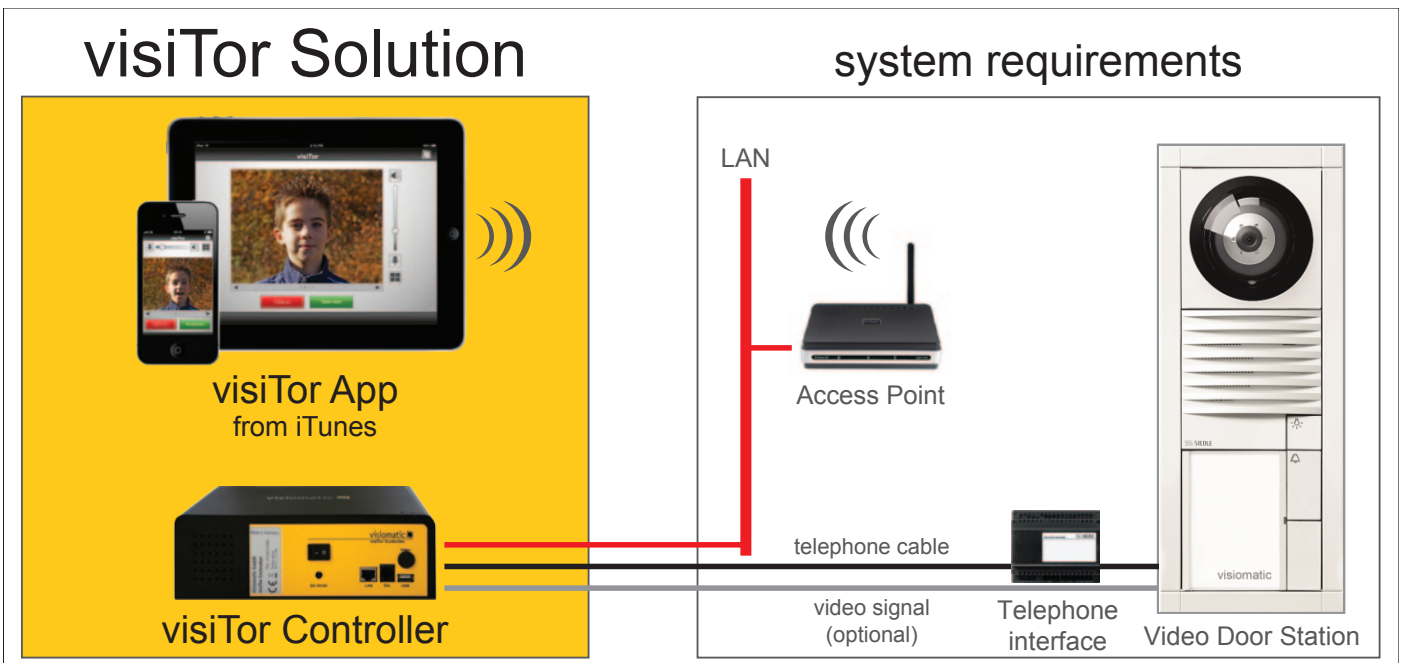

visiTor – easy to install.

The visiTor-system consists of a compact (9.72" x 6.69" x 3.14") controller, which is available from visiomatic or one of our certified partners, and free visiTor app.

The visiTor Controller is easily connected to the analog telephone line of your video intercom system interface. Furthermore only one power connection and a connection to your existing LAN installation is required. For connecting analog video signals, the controller can be expanded with an optional module for video processing.

Communication with your iPhone or iPad is established via a WLAN connection-anywhere in your home or garden, visiTor is ready wherever WLAN is available. This requires only a few settings in the configuration of the iPhone or iPad (e.g. IP address and port of the visiTor controller). Via Web browser, you can then adjust individual camera settings, SIP Gateway, intercom system etc.

In the basic version of visiTor up to five devices (iPads/iPhones) can be used at one controller. Additional devices can be added at any time via a license upgrade, additional hardware components are not necessary.
