

# visiomatic® Home System

Private Home

# Sweet Home

Indulge yourself in the comfort, which you earnt. Using the visiomatic® Home System, you can manage and control all technologies inside your domicile with only one single display. The easily understandable symbolism and single words and terms make usage mere a child's play. Instruction manuals and hand books are not necessary at all, because nobody knows the building as well as you yourself and the visiomatic® Home System was especially adapted to this and your wishes.

Benefit from the effective synthesis of:

- Light and climate control
- Control of security and alarm systems
- Integration of answering machines and telecommunication systems
- Internet and e-mail
- Control of multi room audio systems
- Beamer
- Plasma displays
- DVD and CD changer
- Video streaming

Choose your own composition of information filters like weather forecast, stock market news, worldwide news, or recipe database.

So much – one touch!

Activate your feel good program: warm light in the winter garden, favourite music at the pool, switch on sauna and forward all incoming calls to the answering machine. In the evening you activate with the visiPad® the alarm system, das night lighting in the park and for the next two hours the watering system for the garden. Some additional pages in the thrilling novel, then a last glance at the visiPad®: no new e-mails, two new calls. On the touch screen you can see the end of the golf masters. Anywhere a window open? No. A single finger tipp and the scenario „good night“ is started: dim the exterior lighting, switch off all lights inside the building, set the bed room's temperature to 18°, switch off audio system, deactivate hourly news,...

You slip off into a sound sleep and leave everything to take care of to the visiomatic® Home System .

The **visiomatic® Home System** as superior, modern control- and visualisation system enables the most easy and efficient integration of all technical areas like building technology, consumer electronics, telecommunications, infotainment and telematics.

Related to the wished functionalities and installation efforts visiomatic offers as control elements the **visiPad® Displays**, Tablet PCs or PDAs as well as touch screen remote controls. Individual adaptations like colouring, individualised menus, or the choice of used materials for the visiPad® Displays is possible.

visiPad® SL18

visiPad® TT15

Tablet PC

# Range of functionalities - extract

## Building technology

- Complete control and visualisation of **room climate** like e.g. heating, ventilation and air conditioning, individually for single zones, areas and rooms or comprehensively for several buildings.
- Complete control and visualisation of **lighting ambience** including connected lighting scenes like ambience for a home cinema night, welcome for guests,...
- Complete control and visualisation of **light and visibility protection** like blinds, jalousies, viewing glass, security shutters,...
- Complete integration of **sensors** for temperature, wind, rain, dampness or movement, e.g. for visualisation of the actual room temperature

## Entertainment electronics

- Complete control and visualisation of all **hifi components**: control of all media like radio, CD or MP3 server including selection via cover and genre, personal favourites as well as control of the output devices like loudspeakers e.g. via multi room audio systems
- Complete control and visualisation of any **video device**: control all media such as DVD, video, digital video (MPEG, AVI) or video streaming including selection via cover and genre as well as administration of personal favourites.
- Complete **TV** control and visualisation including program selection following criterias such as TV station, date, time and genre including detailed descriptions, watching in full screen and picture-in-picture mode as preview.
- **In-built TV** mit PiP and preview

## Communication & information

- Additional individual **information filter** such as: traffic news, worldwide weather forecasts, recipe database, cinema program, digital TV program, skiing weather, trade fair and event calendar, as well as additional individual services
- Complete usage of **internet functionalities**: integrated standard browser, access via favourites, e-mail and diverse web services,...
- Complete usage of the **telecommunication area** with the **visiPad®SL18**: ISDN telephone functionalities, video phone, voice mail, answering machine, inhouse-video telephony,...

## Scenarios

- All functions can be executed for **several rooms and buildings**, like e.g. sound and light off, close roller shutters, activate security system, ...
- Unlimited combinations of functionalities, like switching off light in all rooms, set temperature to 18°, ...
- Complete **daily routines** can be deposited

# Advantages

visiomatic developed its products basing on the vision to improve modern people's quality of life, comfort and security with innovative technologies and customer oriented design. Today, visiomatic is with the visiomatic® Home System the worldwide technology leader and offers extensive advantages:

- Only Ready-to-go-Produkt for integrated building-audio-video management in the worldwide SmartHome market
- Highest comfort of usage thanks to the standardised user interface
- Open interfaces and various possibilities to integrate external systems and devices
- Best protection of investment by basing on international software and interface standards
- Best design (European Design Award 2001 / International Design Award BW 2004)
- Control of all technologies and of all media with one single display (**visiPad®**)
- Substitution of all remote controls as well as substitution of further devices
- Most easy usage without any handbook or instruction thanks to the self-explanatory user interface
- Although all technology areas can be controlled via the visiomatic® Home System they can parallelly be controlled in the normal kind of way and work reliably self-sustaining.
- More comfort, service and lifestyle

# Installation

The installation efforts for the **visiomatic® Home System** is as individual like the functionalities, which it offers. The software for visiomatic's wireless products like Tablet PCs, PDAs or touch screen remote controls, offers the comfortable possibility to integrate the top technology without complex wiring.

In general, the **visiomatic® Home System** only needs a place, where the visiServer® can be connected to the wished end devices or the building management system, like a technical room. The connection between the controller and the **visiPad® displays** is a modern cable set, which visiomatic developed for less installation efforts and which can be taught easily through the existing ductworks.

Supplementary extensions of the existing system, like control of additional end devices or the integration of new services, don't cause additional installation efforts and can even be done via remote maintenance.

The **visiomatic® Certified Partners** are your competent contact persons on site for all your questions and wishes, who know your requirements and offer a complete all around support. visiomatic and the **visiomatic® Certified Partners** assist you in every stage, from the analysis of your needs, wishes and requirements, to planning and installation, including interworking with architects, planners and electricians to widening the systems through additional functionalities via remote maintenance.
